

Create a Custom Report

Noraxon provides their customers with a set of premade reports to present analyzed data. However, we understand that every user is different and will require different analysis tools and displays based on what they are trying to accomplish. For this reason, Noraxon reports can be customized to allow customers to create and present their data in a way tailored specifically to their needs. There are two ways to create custom reports: create a new, blank report or edit an existing report. To accomplish this, please follow the steps appropriate for the software being used.

Note: myoMUSCLE Data Acquisition and myoMUSCLE Essential do not allow users to customize reports.

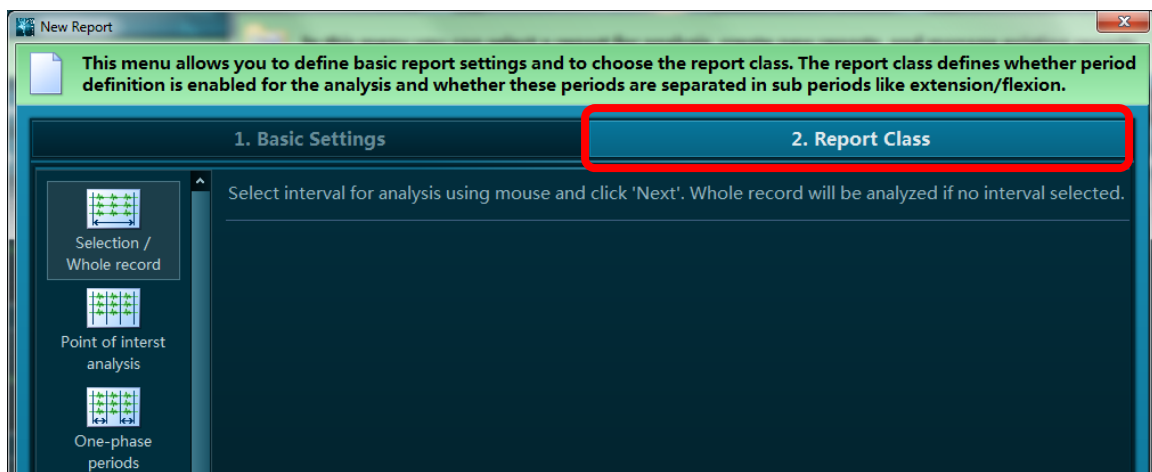

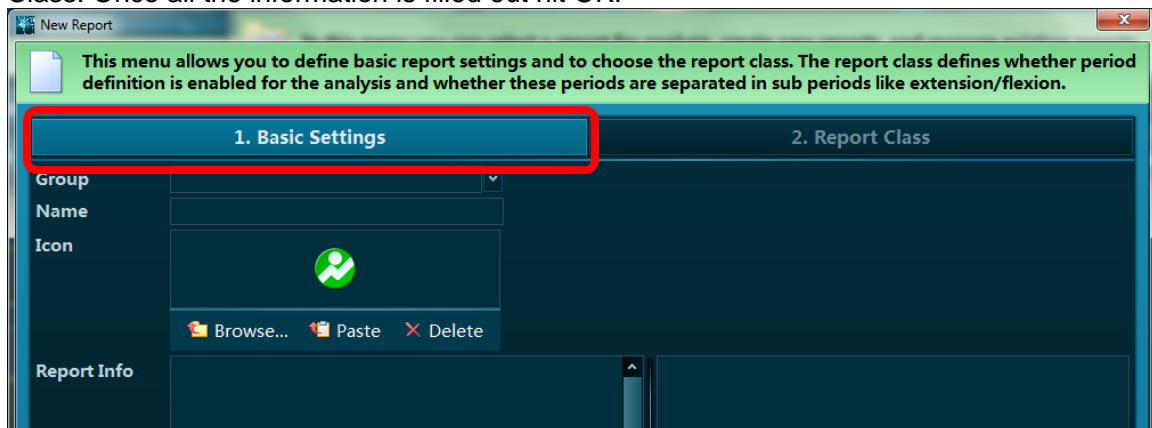

Create a new report:

1. Open a record and hit the  or  button
2. In the Select Report menu, choose New

3. In the New Report menu, enter the information for the Basic Settings and select the Report Class. Once all the information is filled out hit OK.

Note: The Report class defines how the record will be analyzed

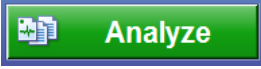

4. A blank report will appear, double click in the designated area to insert an analysis element. Continue to click in the designated areas until all the desired report analysis elements have been inserted.

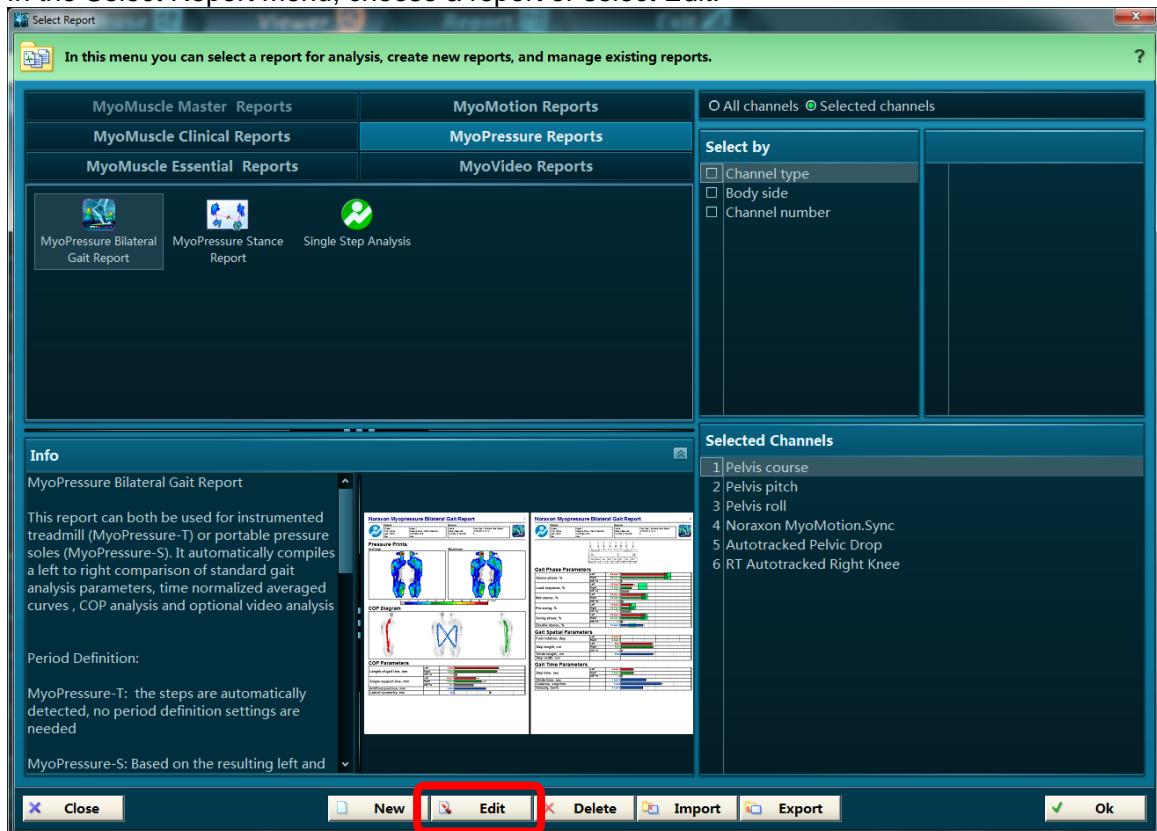

Double-click here to insert an element.

5. When done editing, select  **Print Preview** and  **Save Report Template As...** to save the report just created.

Edit a current report:

1. Open a record and hit the  or  button
2. In the Select Report menu, choose a report or select Edit.

3. If the Edit option was selected menu, enter the correct information for the Basic Settings and select the Report Class. Once all the information is correct hit OK. (See step 3 above)

4. Once in the report, select  and Delete or New Element, depending on which action the user would like to perform.
5. If New Element is selected, dashed boxes will appear where the user is able to insert a new element. Double click in the designated area to insert an analysis element. Continue to click in the designated areas until all the desired report analysis elements have been inserted.

Double-click here to insert an element.

6. When done editing, select  and  to save the report just created. It is recommended to always save an edited report as a new report so the user may still have access to original reports.

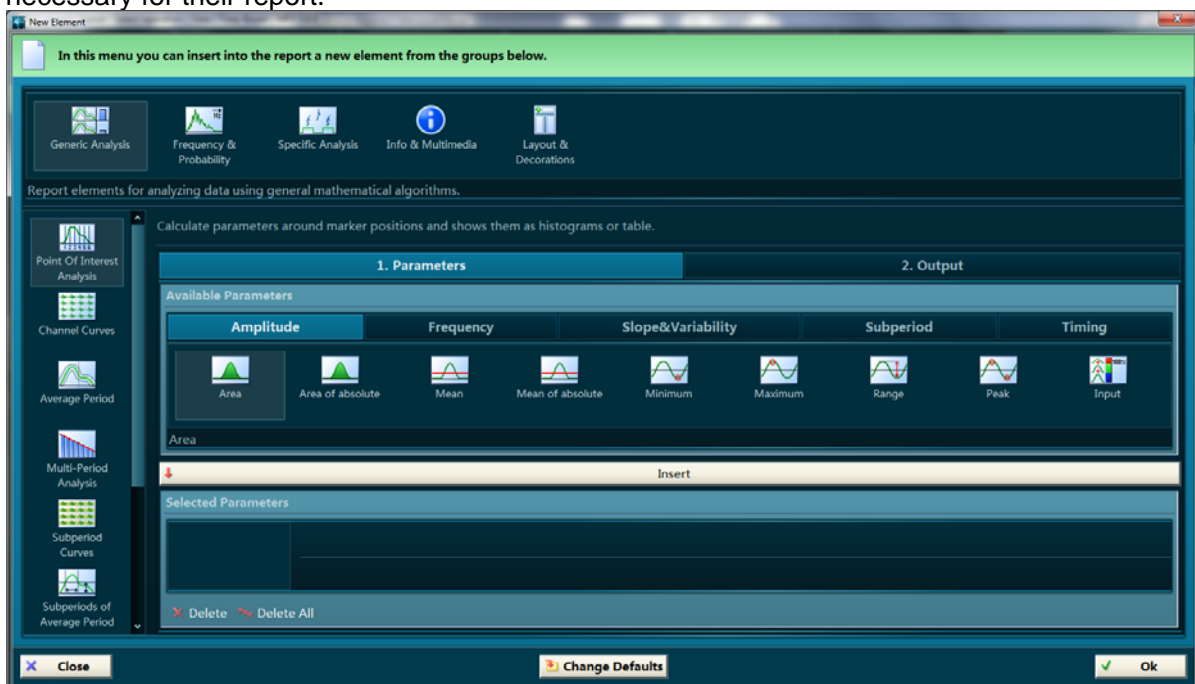

Report Elements:

There are a number of report elements that can be inserted into the report. There are 5 categories of elements, each with a short description that appears below the categories.

Under each category are the types of available analyses. Each analysis will have different parameters available. It is up to the user to determine which analyses and settings are necessary for their report.

More information can be found in the software manual under the Edit Report section.
